β -CARBA test

Principe: Hydrolyse in vitro d'un carbapénème chromogénique

Carbapénémase

Avantages:

- Simple
- Rapide (30 min)

Inconvénients:

- **Absence de détection** des enzymes de type IMI, NmcA, SME
- Non utilisable directement à partir du prélèvement rectal
- Difficulté de lecture pour quelques souches OXA-48

Spectrométrie de masse : MALDI-TOF

Hydrolysis of β -lactam's ring leads to mass shift that can be detected easily by MALDI-TOF MS

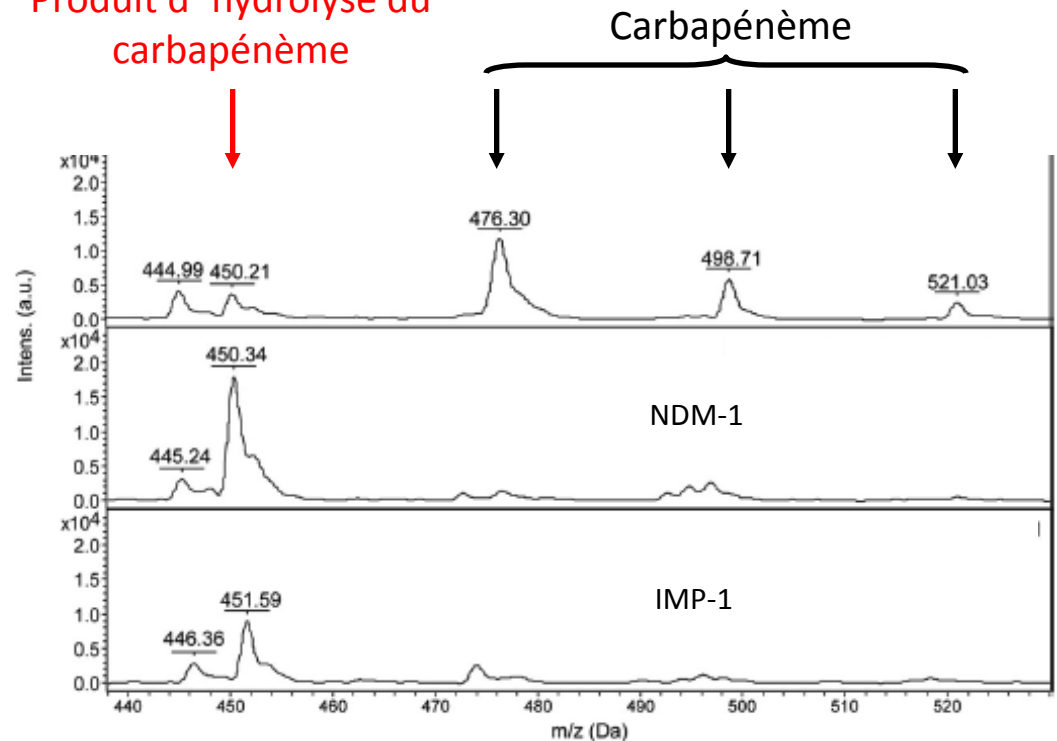

Hrabák et al. JCM. 2011
Burckhardt et al. JCM. 2011
Hrabák et al. JCM. 2012
Lasserre et al. JCM 2015

En pratique :

- 1) Bouillon contenant la bactérie à étudier + carbapénème : 20 min – 4h incubation
- 2) Spectromètre de masse
- 3) Si carbapénémase + : hydrolyse du carbapénème et apparition d'un produit de dégradation

Produit d'hydrolyse du carbapénème

Spectrométrie de masse : MALDI-TOF

- ❑ **MALDI-TOF techniques** are reliable tools for the **rapid detection of CPE**
- ❑ Global performances :
 - **Sensitivity 96.5% to 100 %**
 - **Specificity 100 %**
- ❑ Advantages of the **MALDI Biotyper STAR-BL®** are :
 - **Concomitant identification** of the bacterial species
 - **The unique CE IVD** assay for MALDI-TOF detection of CPE
 - **No subjective interpretation**
 - **Cost for already MALDI-TOF users ???**

RESULTS : Workflow vs RAPIDEC® CARBA NP

Product	Specimen	Format	Packaging	Storage	Shelf-life	Cat. Ref.
NG-Test CARBA 5	Culture	Cassette	20 tests	4-30°C	24 months	NGB-CAR-S23-002

Performance Characteristics

Detection limit

The detection limits were determined using purified recombinant enzymes:

NDM	150pg/mL
IMP	200pg/mL
VIM	300pg/mL
OXA	300pg/mL
KPC	600pg/mL

Validation on a reference strain bank

NG-Test CARBA 5 was evaluated on 167 clinical strains at the CNR of CHU Kremlin Bicêtre - Paris - France (AMR French Referent Center). Considering the carbapenemases targeted all the results were correlated with the genotype of the strains determined by PCR analysis.

Status \	Positive	Negative	Total
Positive	116	0	116
Negative	0	51	51
Total	116	51	167

Sensitivity : 100%

Confidence interval : 94,8% to 100%

Specificity : 100%

Confidence interval : 96,5% to 100%

The NG test CARBA 5 detects at least the following variants:
NDM-1 / 4 / 5 / 6 / 7 and 9

KPC-2 and 3

IMP-1 / 8 and 11

VIM-1 / 2 / 4 and 19

OXA-48 / 181 / 204 / 232 / 244 / 517 / 519 and 535

But also OXA-163 and OXA-405 (OXA-48-like extended spectrum oxacillinases)

Interpretation

NOTE: Multiple lines or one line on K, O, V, I, N position must be considered as a positive result

SUMMARY

1) Epidemiology and dissemination of carbapenemase producing Enterobacteriaceae (CPE)

1) CPE Detection methods

a) From a clinical sample (infection)

b) Screening of colonized patients

HOW? STOOLS / SWABS

Rectal Swabs Are Suitable for Quantifying the Carriage Load of KPC-Producing Carbapenem-Resistant *Enterobacteriaceae*

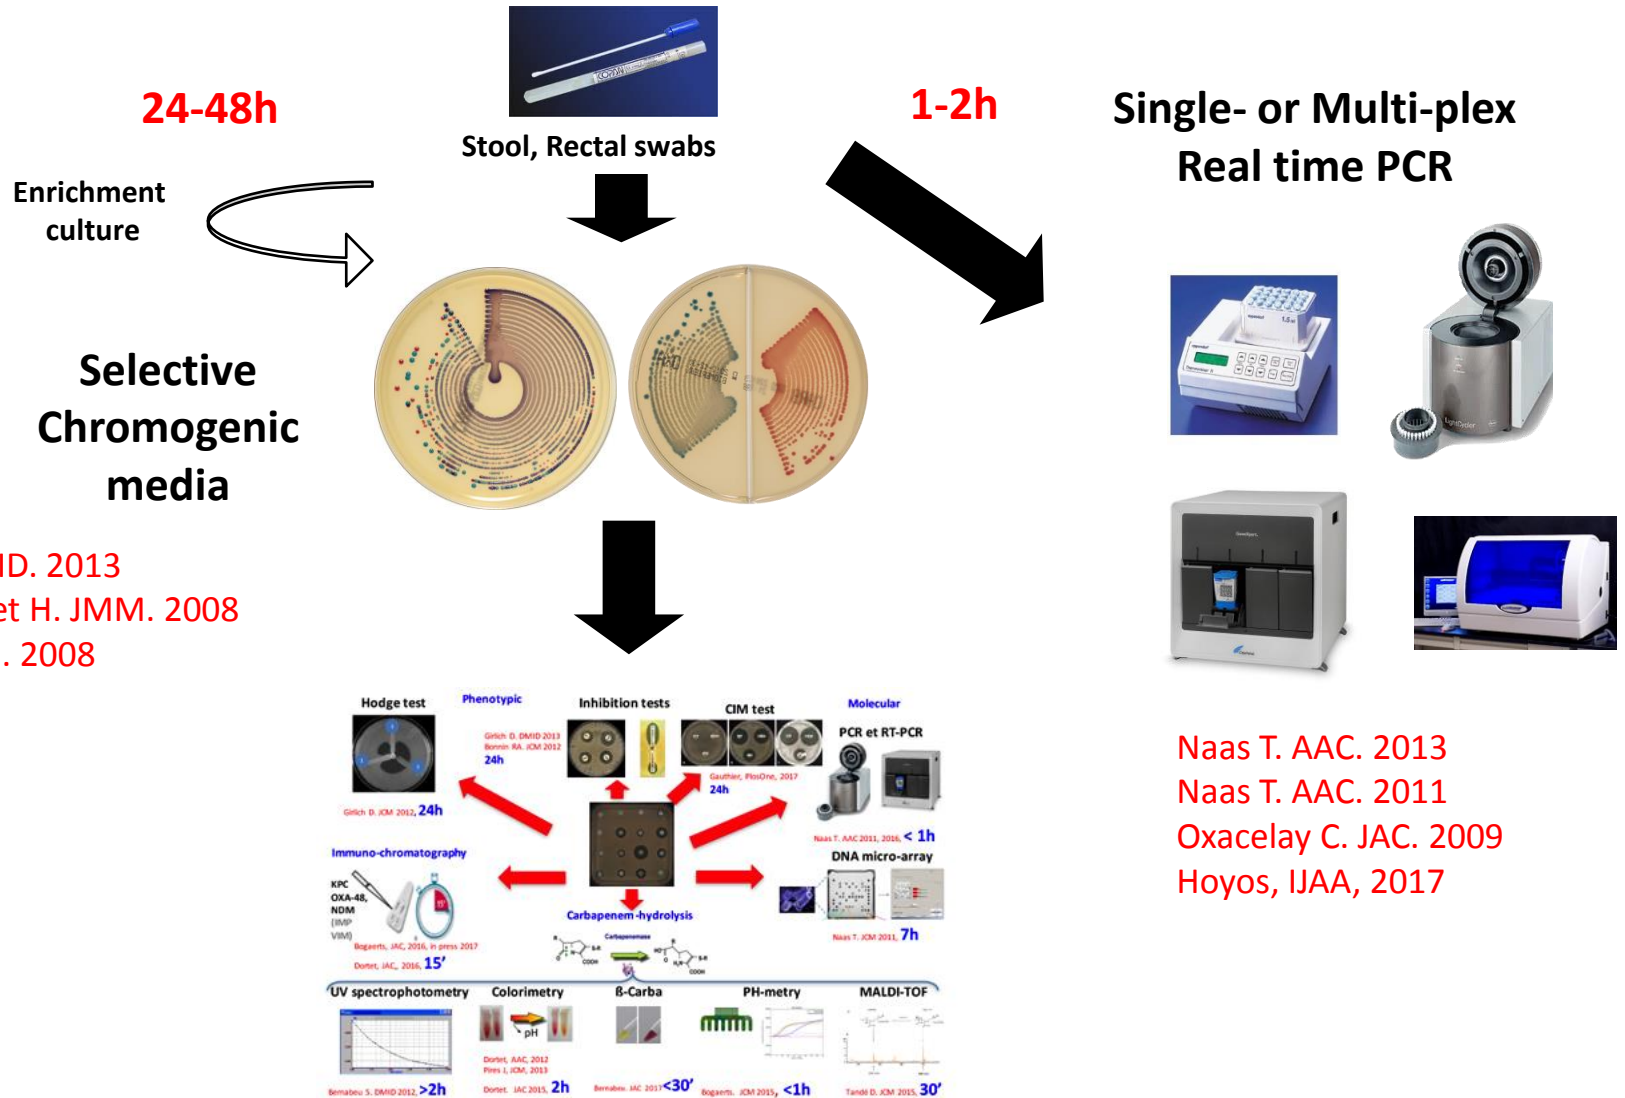

A. Lerner,^{a,b} J. Romano,^{a*} I. Chmelnitsky,^a S. Navon-Venezia,^a R. Edgar,^a Y. Carmeli^a

Molecular Epidemiology and Antimicrobial Resistance Laboratory, Division of Epidemiology, Tel Aviv Sourasky Medical Center, Tel Aviv, Israel^a; Sackler Faculty of Medicine, Tel Aviv University, Tel Aviv, Israel^b

It is more convenient and practical to collect rectal swabs than stool specimens to study carriage of colon pathogens. In this study, we examined the ability to use rectal swabs rather than stool specimens to quantify *Klebsiella pneumoniae* carbapenemase (KPC)-producing carbapenem-resistant *Enterobacteriaceae* (CRE). We used a quantitative real-time PCR (qPCR) assay to determine the concentration of the *bla*_{KPC} gene relative to the concentration of 16S rRNA genes and a quantitative culture-based method to quantify CRE relative to total aerobic bacteria. Our results demonstrated that rectal swabs are suitable for quantifying the concentration of KPC-producing CRE and that qPCR showed higher correlation between rectal swabs and stool specimens than the culture-based method.

HOW TO SCREEN ? : CULTURE / MOLECULAR

- Culture: **cheap**, but lack of specificity and sensitivity, and LONG
- Molecular tools are often perceived as:

FASTER

Less than one hour

MORE ACCURATE:

Highly Sensitive and Specific

EASIER

Reduced hands-on-time, user friendly

**MORE EXPENSIVE,
BUT WITH A MEDICAL ADDED VALUE**

The answer is in the CPE prevalence and the risk assessment
